CLIMATE CHANGE

- **1.1°C increase** since 1850
due to human activity
(IPCC AR6 WGI, 2021)
- transport sector now largest
emitter of GHG in UK
(Department for Transport, 2021)

OUR SOLUTION

- journey planning app
- calculates GHG emissions by
transport type

KEY FEATURES:

User Registration /
Log in

Plan a Journey

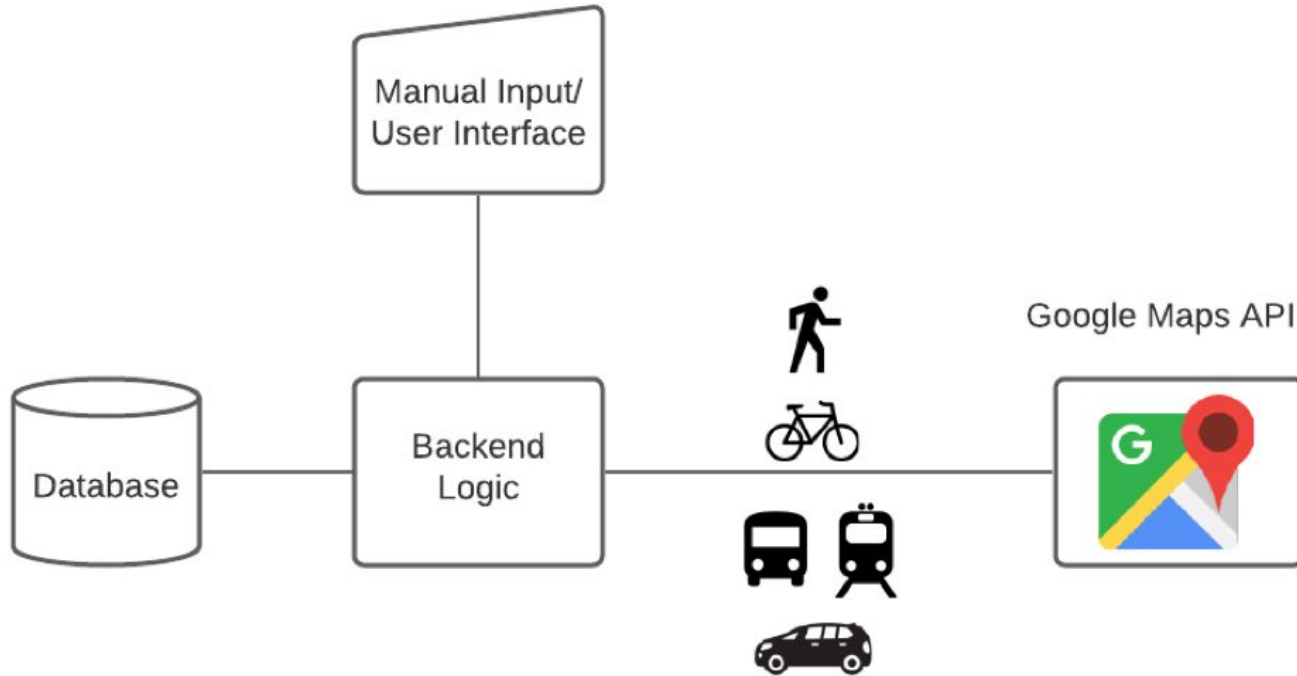

Emission Offset

Represent with Trees

SERVICE ARCHITECTURE:

DEMO

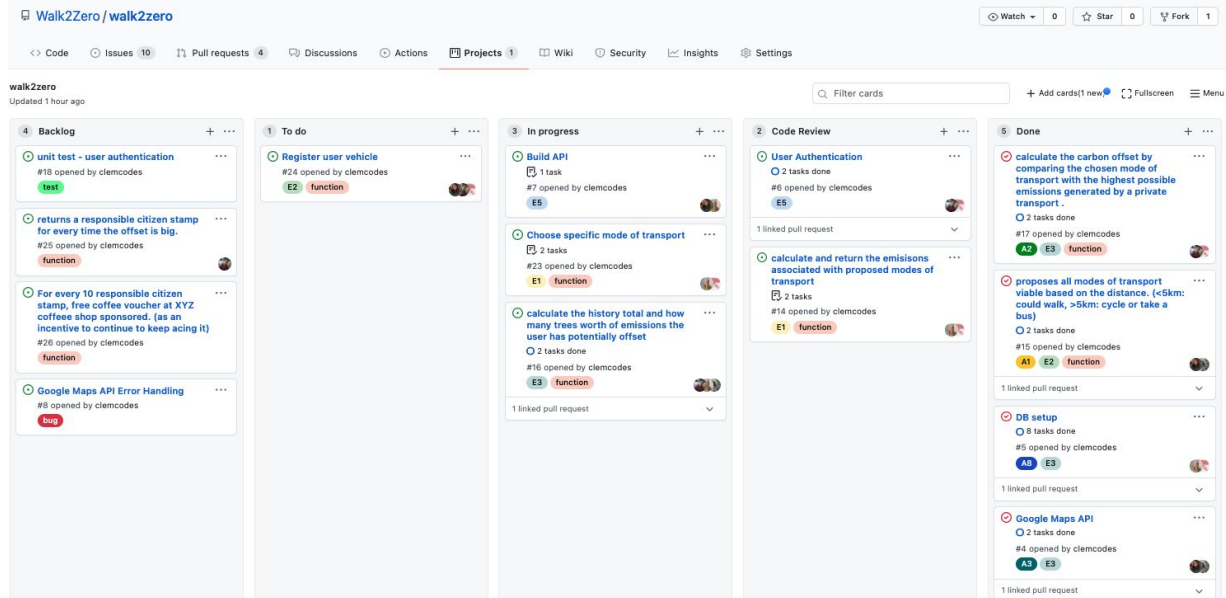

SYSTEM LIMITATIONS:

- command-line app
- average transport emissions
- doesn't break down transit
- doesn't map route

WORKING TOGETHER AS A TEAM

- Kanban Board on Git to maintain requirements backlog
- Plenty code reviews over Slack and Google Meets
- Lots of motivation, proactiveness and consideration for each other

The ONLY valid measurement
of code quality: WTFs/minute

(SOME) CHALLENGES

- Initial Git collaboration
- Functions to OOP Architecture
- Building as we were going: adhoc changes
- Time constraint

REFACTORING IS KEY

#SOLIDftw

FUTURE DEVELOPMENT:

Sophisticated
GUI

Calories
Burnt

Badges and
Competitions

CONCLUSION & MOTTO:

Figure 3: Greenhouse gas emissions by sector, 2019, by proportion ([BEIS, 2021](#))

- Road transport- 5th place
- User-climate friendly transport
- Motivate towards climate goals
